

## Why Order from Juniata Computer?

The owners of Juniata Computer are both graduates from Juniata College who have worked with the college's IT personnel for several years. They evaluate notebook models to offer to students so that they will be as prepared as possible when they enter a completely different pedagogical atmosphere. Each year, Juniata Computer receives feedback from the college IT personnel as to what they recommend students entering college should be bringing; therefore the choices offered are guaranteed to meet or exceed the college's minimum requirements. Large department stores aren't worried about those minimum requirements as they are only concerned about making a sale. Furthermore, we hire only college students to assist with repairs for our customers to help them gain real world work experience.

Juniata Computer also installs only trusted software and configurations that a student will need to be prepared for joining the college network. Department stores install "bloatware" on their machines that take up space and leave the computer running slowly right out of the box. We reformat every computer before you receive it to ensure that the computer is only running what a student would need to start off his or her college career. Finally, Juniata Computer customers benefit by having a trusted individual to call with questions or problems. We will gladly and personally answer any questions you have about the system before and after you purchase it. If you purchase a warranty, we will also gladly assist and facilitate in communication with the manufacturer to have hardware problems fixed as quickly as possible. No department store can offer the individualized attention and support that Juniata Computer can provide students during their college career... we guarantee it!

*Providing quality systems and advanced support for personal and enterprise systems since 2006 as a Dell Certified Partner.*
